

JEFFERSON ANTONIO ROJAS BRIZUELA

SOFTWARE ENGINEER | C# / .NET | ANGULAR | SQL SERVER

San José, Costa Rica | +506 8672-0450 | 05jeffer03@gmail.com | luxurycloud.app

PROFESSIONAL SUMMARY

Software Engineer with 1+ year of hands-on experience designing, building, deploying, and supporting a production multi-tenant SaaS. Strong foundation in object-oriented programming, C#/.NET, ASP.NET Core, SQL Server, Entity Framework Core, Git, and modern web development, with current hands-on Angular and TypeScript project work. Experienced in translating business workflows into maintainable software, resolving production defects, documenting technical decisions, and collaborating directly with users. Motivated to apply disciplined engineering practices to healthcare software and grow in regulated development, traceability, and verification.

TECHNICAL SKILLS

Languages & frameworks: C#, .NET 10, ASP.NET Core MVC, Angular, TypeScript, JavaScript, HTML, CSS/SCSS, Razor, LINQ

Software engineering: Object-oriented programming, SOLID, dependency injection, async/await, layered architecture, REST APIs, validation, authentication and authorization

Data: SQL Server, T-SQL, Entity Framework Core, relational modeling, tables, views, stored procedures, indexes, migrations, Row-Level Security

Quality & delivery: Git, GitHub, unit and integration testing, defect resolution, technical documentation, requirements analysis, traceability, verification activities, production diagnostics

Cloud & integrations: Ubuntu Linux, DigitalOcean, Nginx, systemd, Cloudflare, SSL/TLS, webhooks, payment flows, Meta WhatsApp Cloud API, transactional email, background workers

PROFESSIONAL EXPERIENCE

Founder & Software Engineer | **LuxuryCloud** | San José, Costa Rica | Aug 2025 - Present

- Designed and delivered a production multi-tenant SaaS for appointment-based businesses, turning stakeholder conversations, spreadsheets, and manual workflows into a deployed software product.
- Developed 10 core operational modules covering financial dashboards, clients, staff and payroll, products, calendar, online booking, public business pages, income, expenses, and operational analytics using C#, ASP.NET Core MVC, Entity Framework Core, and SQL Server.
- Automated the complete weekly payroll calculation workflow by connecting completed appointments, collaborator commission rules, and payment records, replacing manual spreadsheet reconciliation with continuously updated totals.
- Implemented tenant isolation across four enforcement layers - tenant-aware services, Entity Framework Core query filters, authorization controls, and SQL Server Row-Level Security - to reduce cross-tenant data-access risk.
- Integrated three external service providers - Tilopay, Resend, and Meta WhatsApp Cloud API - and implemented webhook processing, audit trails, idempotency, and reconciliation mechanisms for more reliable production workflows.
- Deployed and operated the platform on Ubuntu Linux, managing controlled database migrations, Nginx, systemd services, environment configuration, production logs, and four background workers with heartbeat monitoring.
- Investigated and resolved production defects involving payment subscriptions, timezone handling, tenant configuration, database migrations, and third-party webhooks using structured logs, SQL diagnostics, audit records, and repeatable tests.

SELECTED PROJECTS

NexoPOS | Custom software prototype | C# / .NET 10 / Clean Architecture / React / TypeScript

- Translated operational requirements for a three-clinic veterinary business handling approximately 50-79 daily transactions per branch into a modular architecture for branch-level inventory, consolidated reporting, billing, purchasing, and movement traceability.
- Structured the solution across five architectural areas - Domain, Application, Infrastructure, API, and automated tests - documenting design decisions and an implementation roadmap for long-term maintainability.

PersonalIOS | In development | Angular / TypeScript / .NET 10 / Web API / xUnit

- Building a personal productivity platform while strengthening Angular component design, routing, forms, accessibility, API integration, and automated testing.

EDUCATION

Bachelor's Degree in Systems Engineering | Universidad Fidélitas | Costa Rica | 2026

LANGUAGES

Spanish: Native | **English:** B2 - Professional working proficiency
